<u>Meeting Minutes</u>

Monday, March 9th from 10:00 – 11:00 pm

- Ethan set up the Apache server and has it working. However, we are thinking it would be better to host the test server on Amazon web services.
- Ethan could also set up a server on his Raspberry Pi, or use XAMPP.
- Katie will be implementing the UI using HTML and CSS.
- Logan will be implementing the database using phpMyAdmin.
- Sam will be dealing with password encryption, sign up and login, etc.
- Dylan, Max, and Ethan will be writing the controller, model classes.
- Base address is currently: http://141.109.124.154/ for the Apache server
